

ABSTRACT OF THE DISCLOSURE

A method, computer program, and system for coordinating closing of one or more documents in a transaction via a communications network (16) such as the Internet so that the parties to the transaction do not have to carefully re-read finalized documents before closing. The method of the present invention is implemented with a host computer (12) that serves as a repository for all documents and other information created and exchanged by multiple parties to a transaction. The host computer (12) may be accessed by authorized parties via computers (14) networked with the host computer (12) via a communications network (16) such as the Internet.
